	File growth set to percent	
	The [model] database is using percent filegrowth settings. This can lead to out of control filegrowth. More information at: http://brentozar.com/go/percentgrowth	
100	**Performance**	**msdb**
	File growth set to percent	
	The [msdb] database is using percent filegrowth settings. This can lead to out of control filegrowth. More information at: http://brentozar.com/go/percentgrowth	
100	**Performance**	**ReportServer**
	Foreign Keys Not Trusted	
	The [ReportServer] database has foreign keys that were probably disabled, data was changed, and then the key was enabled again. Simply enabling the key is not enough for the optimizer to use this key - we have to alter the table using the WITH CHECK CHECK CONSTRAINT parameter. More information at: http://BrentOzar.com/go/trust	
100	**Performance**	**ReportServerTempDB**
	Foreign Keys Not Trusted	
	The [ReportServerTempDB] database has foreign keys that were probably disabled, data was changed, and then the key was enabled again. Simply enabling the key is not enough for the optimizer to use this key - we have to alter the table using the WITH CHECK CHECK CONSTRAINT parameter. More information at: http://BrentOzar.com/go/trust	

Priority	Findings Group	Database Name
	Finding	
100	**Performance**	**CashvaultReplicated**
	High VLF Count	
	The [CashvaultReplicated] database has 5651 virtual log files (VLFs). This may be slowing down startup, restores, and even inserts/updates/deletes. More information at: http://BrentOzar.com/go/vlf	
100	**Performance**	**tempdb**
	Multiple Log Files on One Drive	
	The [tempdb] database has multiple log files on the H drive. This is not a performance booster because log file access is sequential, not parallel. More information at: http://BrentOzar.com/go/manylogs	
100	**Performance**	
	Slow Storage Writes on Drive E	
	Writes are averaging longer than 20ms for at least one database on this drive. For specific database file speeds, run the query from the information link. More information at: http://BrentOzar.com/go/slow	
100	**Performance**	
	Slow Storage Writes on Drive F	
	Writes are averaging longer than 20ms for at least one database on this drive. For specific database file speeds, run the query from the information link. More information at: http://BrentOzar.com/go/slow	
100	**Performance**	
	Slow Storage Writes on Drive G	
	Writes are averaging longer than 20ms for at least one database on this drive. For specific database file speeds, run the query from the information link. More information at: http://BrentOzar.com/go/slow	
100	**Performance**	
	Slow Storage Writes on Drive H	
	Writes are averaging longer than 20ms for at least one database on this drive. For specific database file speeds, run the query from the information link. More information at: http://BrentOzar.com/go/slow	
110	**Performance**	**ReportServer**
	Active Tables Without Clustered Indexes	
	The [ReportServer] database has heaps - tables without a clustered index - that are being actively queried. More information at: http://BrentOzar.com/go/heaps	

Priority	Findings Group	Database Name
	Finding	
110	**Performance**	
	Queries Forcing Order Hints	
	2 instances of order hinting have been recorded since restart. This means queries are bossing the SQL Server optimizer around, and if they don't know what they're doing, this can cause more harm than good. This can also explain why DBA tuning efforts aren't working. More information at: http://BrentOzar.com/go/hints	
200	**Informational**	
	Backup Compression Default Off	
	Backup compression is included with SQL Server 2008R2 & newer, even in Standard Edition. We recommend turning backup compression on by default so that ad-hoc backups will get compressed. More information at: http://BrentOzar.com/go/backup	
200	**Informational**	
	Linked Server Configured	
	ASPRODDB-BUR01\MODBA is configured as a linked server. Check its security configuration to make sure it isn't connecting with SA or some other bone-headed administrative login, because any user who queries it might get admin-level permissions. More information at: http://BrentOzar.com/go/link	
200	**Informational**	master
	Tables in the Master Database	
	The CommandLog table in the master database was created by end users on May 15 2014 4:16PM. Tables in the master database may not be restored in the event of a disaster. More information at: http://BrentOzar.com/go/mastuser	
200	**Non-Active Server Config**	
	min server memory (MB)	
	This sp_configure option isn't running under its set value. Its set value is 0 and its running value is 16. When someone does a RECONFIGURE or restarts the instance, this setting will start taking effect. More information at: http://www.BrentOzar.com/blitz/sp_configure/	
200	**Non-Default Server Config**	
	Agent XPs	
	This sp_configure option has been changed. Its default value is 0 and it has been set to 1. More information at: http://BrentOzar.com/go/conf	
200	**Non-Default Server Config**
